

K600 rating curves on depth: linear vs power (M8) vs M6 breakpoint

points = gas-dome measurements (base exclusions); dashed = calibration range, curve clamped

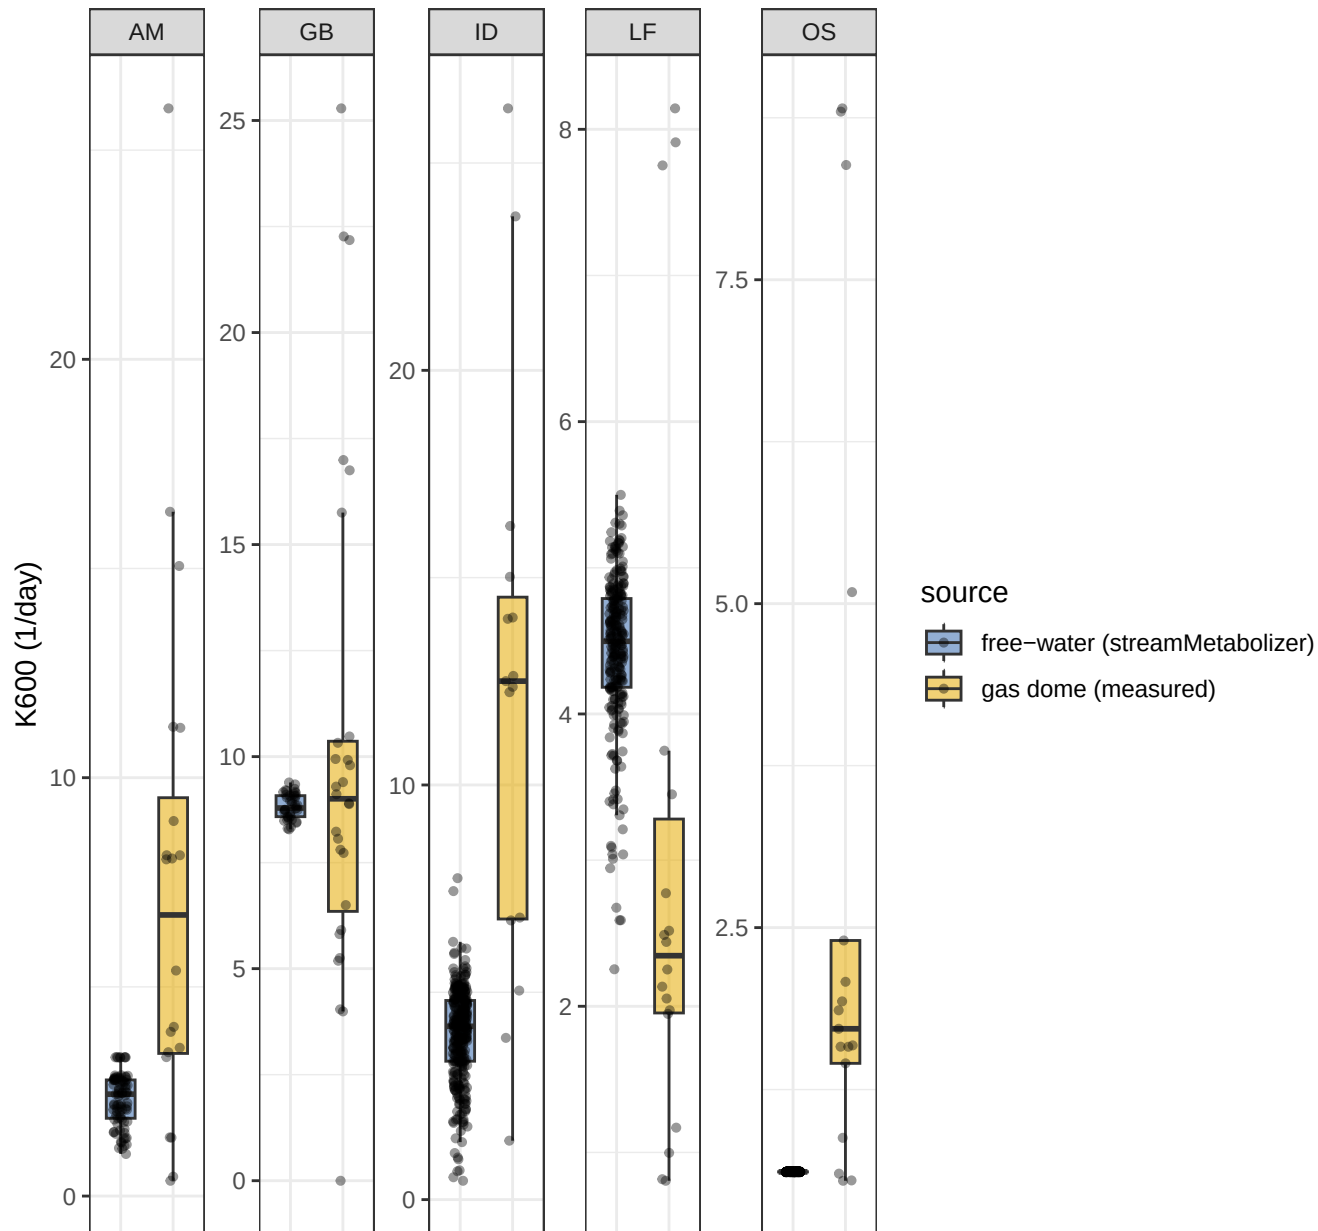

K600 rating curves on velocity: linear vs power (M8) vs M6 breakpoint

velocity from the power velocity RC; M6 = power below a fitted breakpoint, flat above

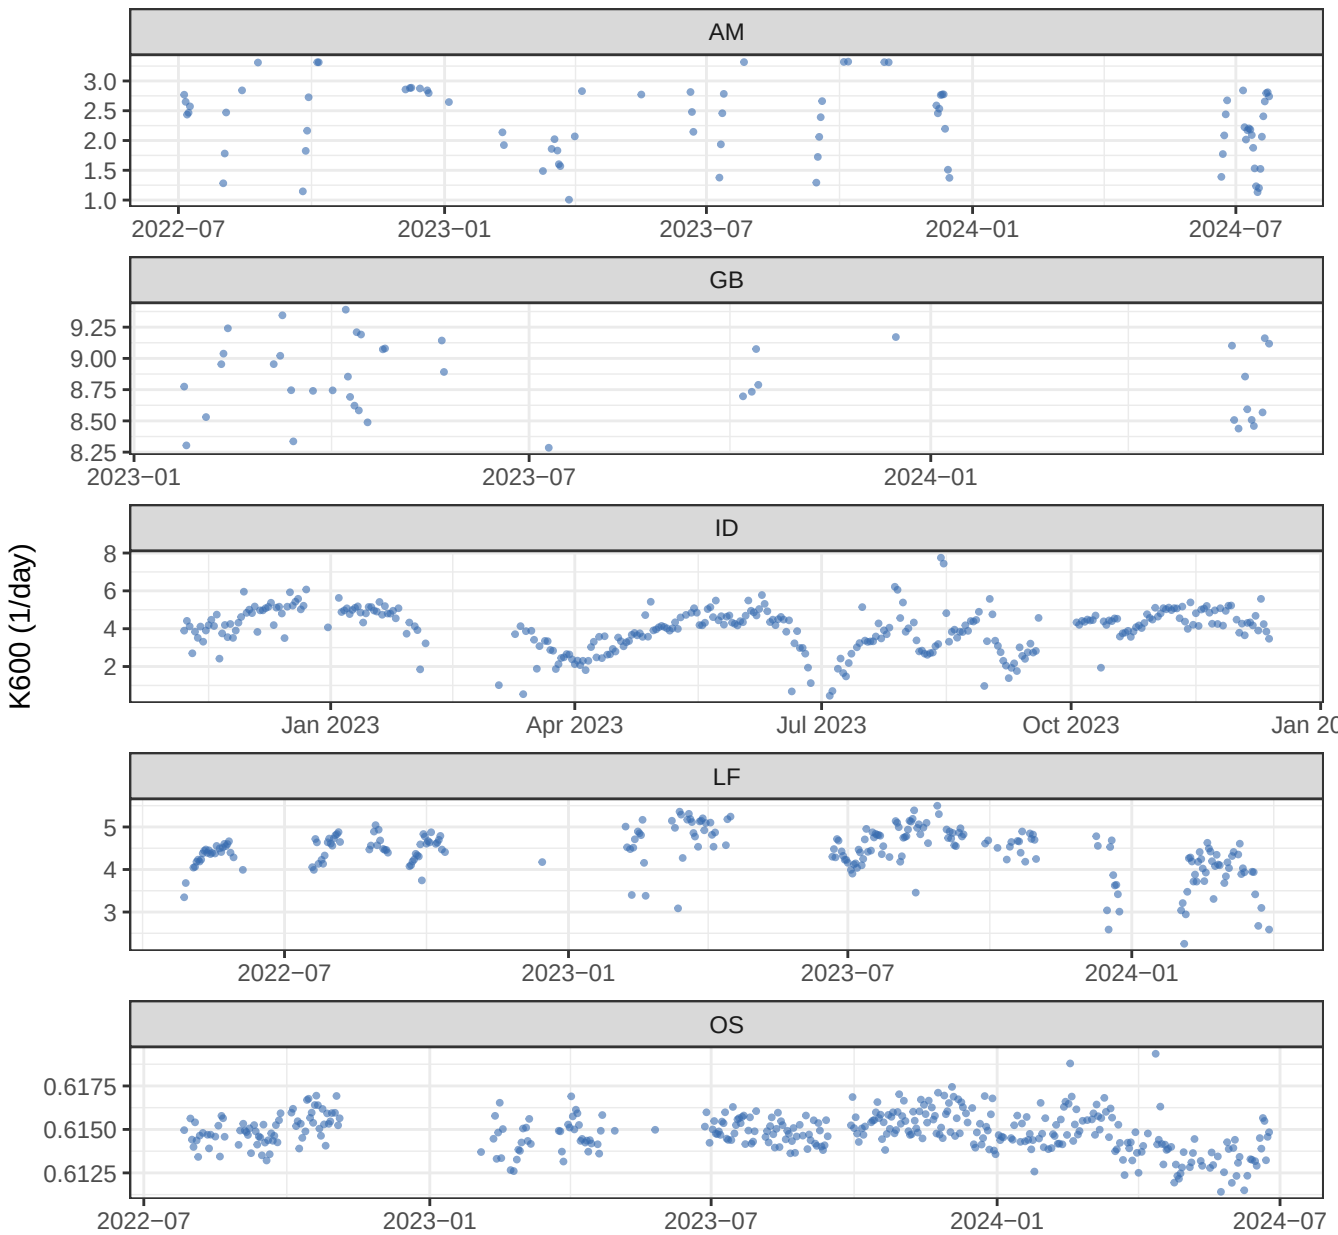

K600: gas-dome measurements vs free-water (streamMetabolizer) estimates

free-water filtered to converged days (Rhat < 1.05); no exclusions applied to the gas-dome point

Free-water (streamMetabolizer) K600 through time

converged days only, Rhat < 1.05

Free-water (streamMetabolizer) K600 vs depth

converged days only (Rhat < 1.05); loess smooth for reference, NOT a fitted rating curve
